

NYC Geoclient API

The Lost Manual

Agenda

- Who
- Why
- What
- Where
- How

Who did it (Who can I blame)?

City Planning

Rudy Lopez - Geosupport manager

Steve Oliver - Geosupport developer

Dept. of Info. Tech. & Telecomm - DoITT

Matt Lipper - Geoclient developer

Andrew Nicklin - Developer Platform PM

Colin Reilly - Project Manager

Greg Soto - 3scale integration

Oleg Suslov - AWS configuration

Why was it done?

- Provide public access to NYC government's geocoding system of record (Geosupport)
- Access to key identifiers used throughout City government (BIN, BBL)
- Help the community engage the City
- Why not?

What is it?

- “REST-ish” web service to Geosupport
- Simplified and expanded requests
- Longitude/latitude

988216.483 192020.000

-73.985, 40.693

Geosupport

- Geocoding system of record for NYC Govt.
- Specific to and customized for NYC
- Developed in the early 80's by City Planning
- Mainframe, desktop and web versions
- Access through function calls
 - Address/Place (function 1, 1A, 1E, 1B)
 - Intersection (function 2)
 - On Street & Two Cross Streets (function 3)

http://www.nyc.gov/html/dcp/html/bytes/applbyte.shtml#geocoding_application

Where can I access?

- Sign-up for an access key: <https://developer.cityofnewyork.us/>
- Geoclient API documentation: <https://api.cityofnewyork.us/geoclient/v1/doc>
- Geoclient API: <https://api.cityofnewyork.us/geoclient/v1>

NYC OpenData 1100+ Datasets Available

Subway use surrounding mega storms

Check out NYC Open Data To Explore Datasets

For existing Visualizations Visualize the Portal (beta)

NYC Open Data Plan

The inaugural edition of the NYC Open Data Plan includes approximately 440 city agency public data sets, the release date, and update frequency for each set. Created following the guidelines set forth in Local Law 11 of 2014.

Get Started With Our APIs

Collaborate with us on Github

Got ideas for an API?

Got a concept for an APP?

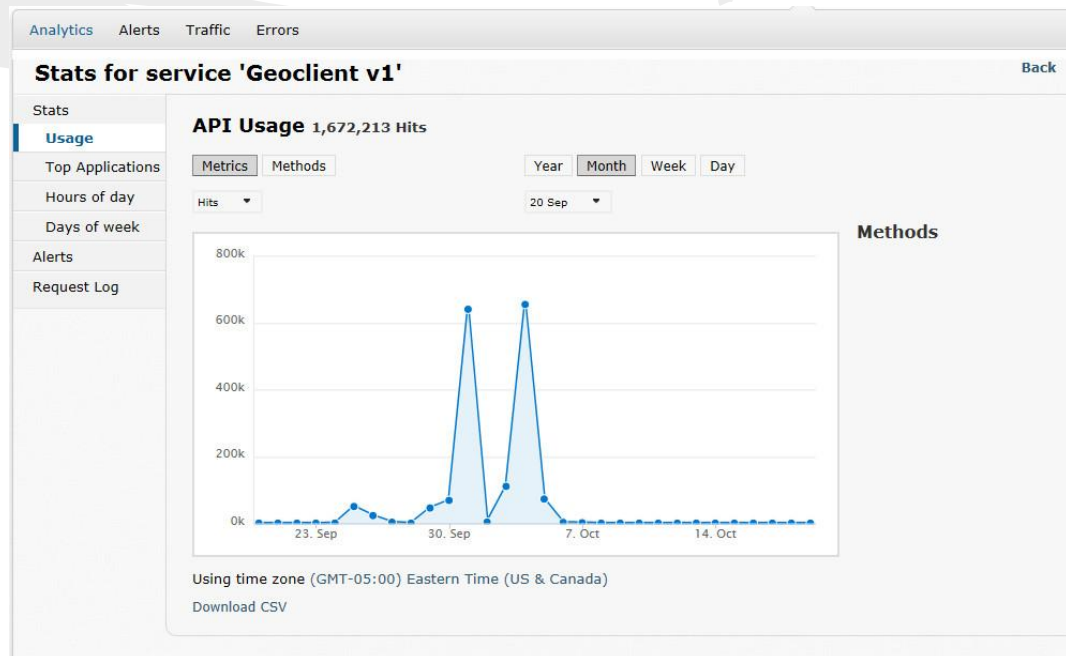

NYC Developer Portal Is...

Your destination for New York City-specific APIs and data sets. We've already opened up hundreds of City data sets through [NYC OpenData](#); now, we're also supplying APIs to make it even easier to access New York City services.

This website is a work in progress – please look around and give us your feedback so we can make it better.

Usage

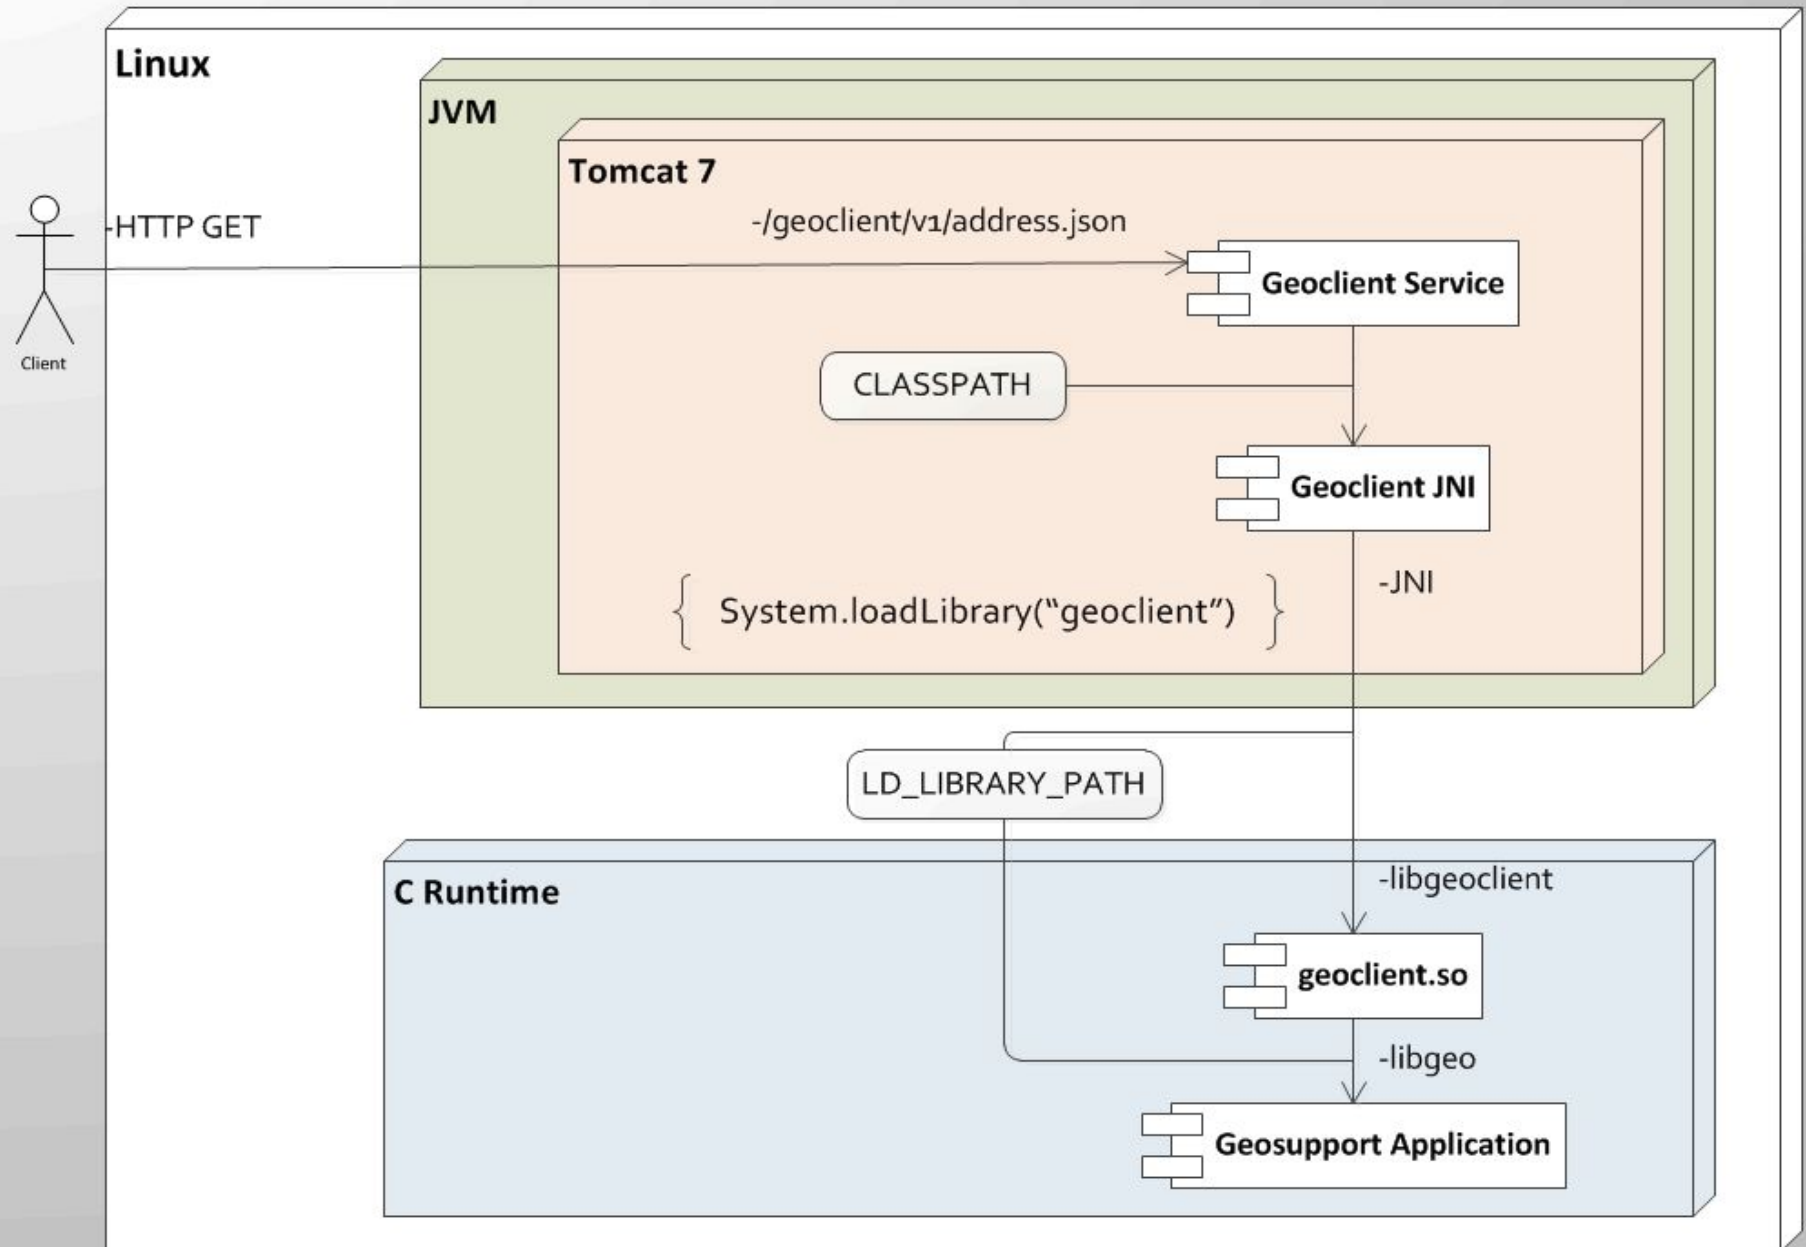

- Released on 9/20 'Beta'
- Approximately 1.6 million hits to date
- 20 API keys distributed
- www.nycvotes.org

Design Goals

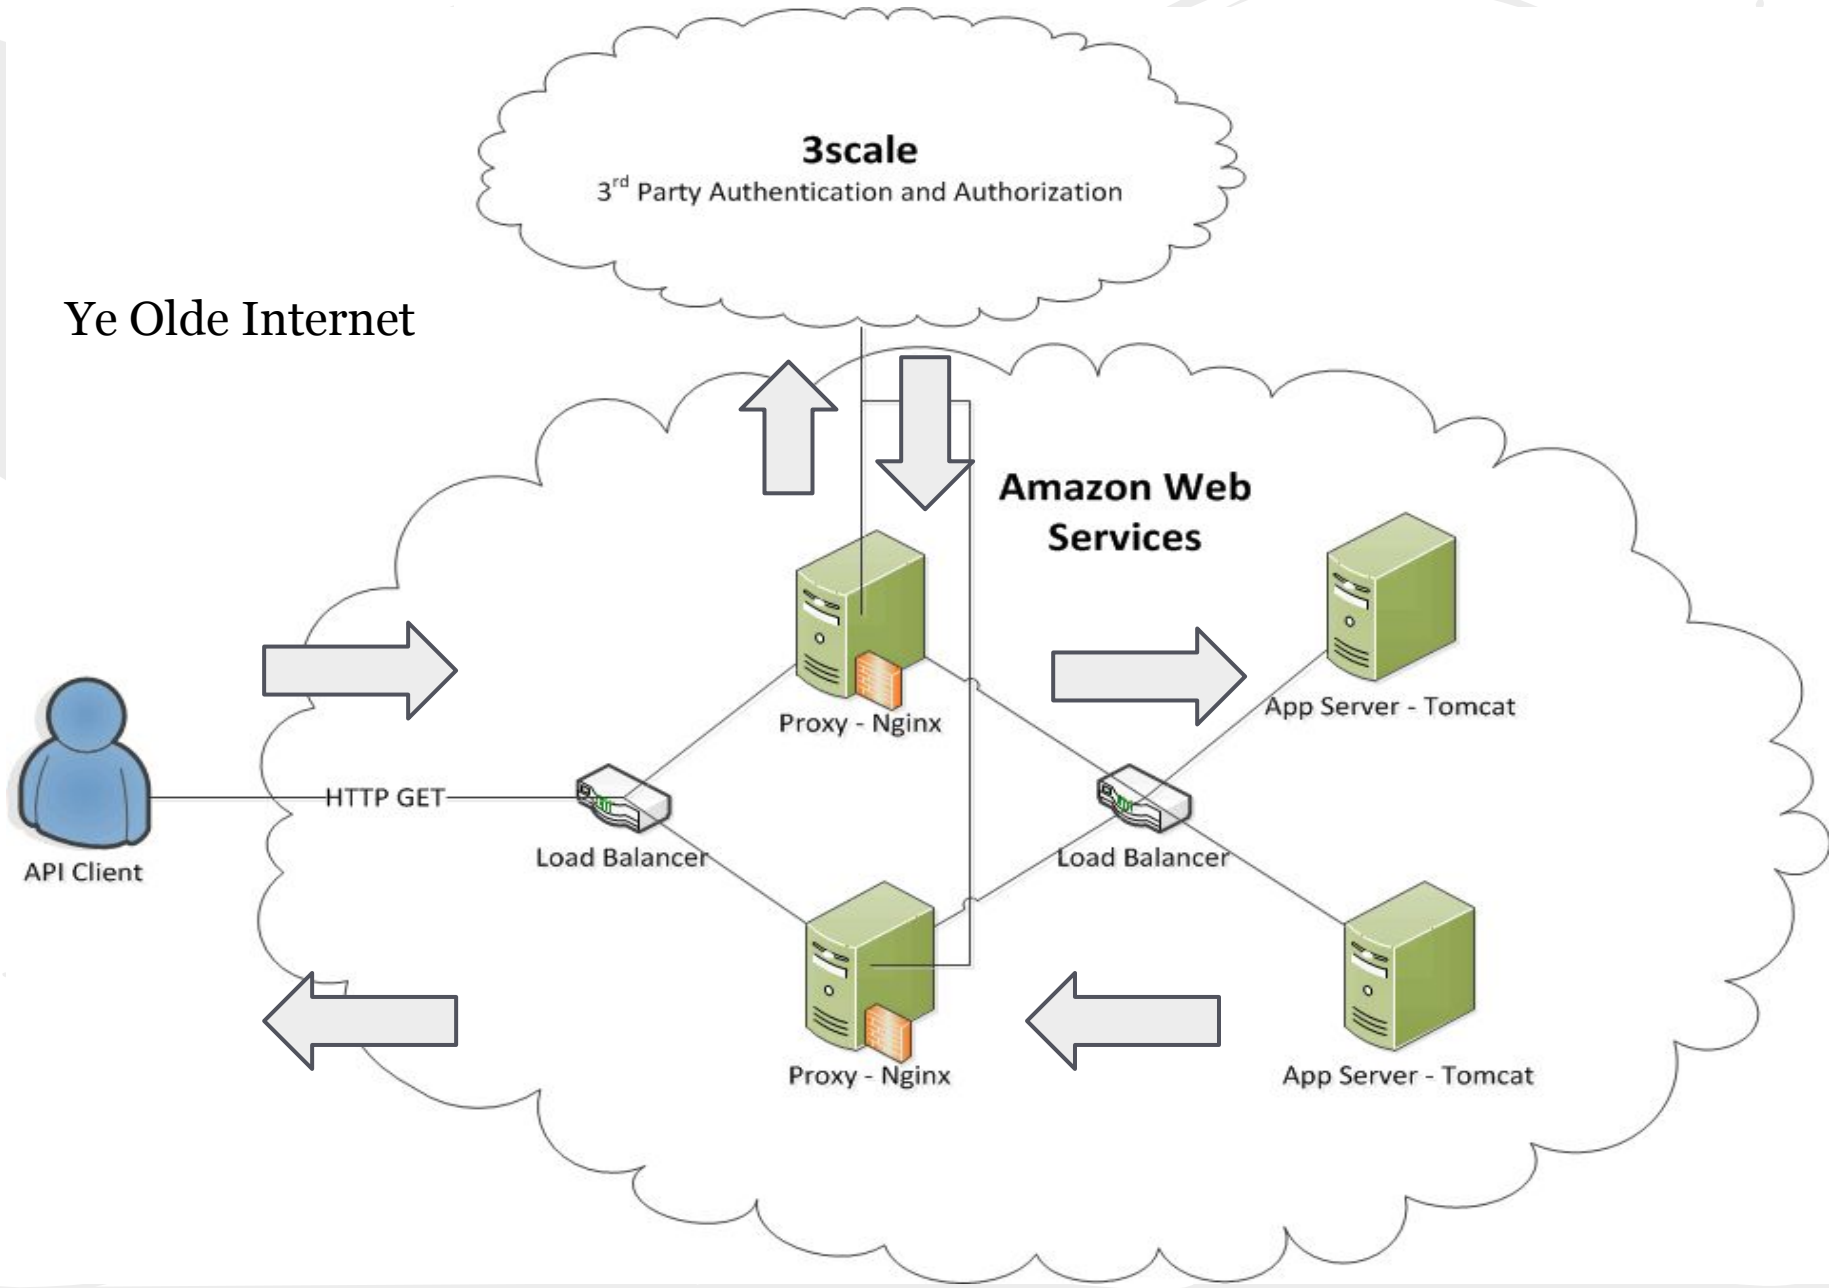

- Simple to
 1. call
 2. use
 3. understand
- Access key functionality w/out in-depth knowledge of the Geosupport API
- Provide the DCP data “as-is”

How it works

Authentication and Authorization

Ye Olde Internet

Geoclient Requests

- HTTP GET

- Format:

`http://<host>/geoclient/v1/<location type>.<media type>?param1=foo`

- location type =

`(address|bbl|bin|blockface|intersection|place)`

- media type = `(json|xml)`

Media Types

- JSON

- application/json
- Almost flat: `{"address": { p1: "a", p2: "b" ... }}`
- Everything is a String except for Lat/Long

- XML

- application/xml
- Almost flat:
`<geosupportResponse><address><p1>a</p1><p2>b</p2>...`
- Schema-less

Location Types

- Address
- BBL
- BIN
- Blockface
- Intersection
- Place

Parameter Types

- House Number
- Street
- Borough
- Building Identification Number
- Block
- Lot
- Compass Direction

Required Auth Parameters

Every request must include:

- `app_id=<your app_id>`
- `app_key=<your app_key>`

Else: `HTTP/1.1 403 Forbidden`

Address

- Input
 - **houseNumber**
 - **street**
 - **borough**
- Output
 - Function **1B**
 - Block-level data from Function **1E**
 - Property-level data from Function **1A**

Intersection

- Input
 - **crossStreetOne**
 - **crossStreetTwo**
 - **borough**
 - **boroughCrossStreetTwo** (optional)
 - **compassDirection** (optional)
- Output
 - Function **2**
 - Geographic information related to the intersection

Blockface

- Input
 - **onStreet**
 - **crossStreetOne**
 - **crossStreetTwo**
 - **borough**
 - **boroughCrossStreetOne** (optional)
 - **boroughCrossStreetTwo** (optional)
 - **compassDirection** (optional)
- Output
 - Function **3**
 - Block-level data

BBL - borough, block, lot

- Input

- **borough**
- **block**
- **lot**

- Output

- Function **BL**
- Building and property-specific data
- Address range information

BIN - building identification number

- Input

- **bin** (building identification number)

- Output

- Function **BN**
- Building and property-specific data about a single building
- Address range information which applies to the building

Place

- Input
 - **name**
 - **borough**
- Output (same as Address)
 - Function **1B**
 - Block-level data from Function **1E**
 - Property-level data from Function **1A**

Address (Function 1B)

Example: 59 Maiden Lane, Manhattan

JSON:

/geoclient/v1/address.json?

houseNumber=59&street=Maiden+Lane&borough=Manhattan

XML:

/geoclient/v1/address.xml?

houseNumber=59&street=Maiden+Lane&borough=Manhattan

Address Response (JSON)

```
